

## Project Title: AI TourGuide

### 1. The rough sketches of the paper prototype's revised parts (20 points)

## 2. The PDF file of the medium-fidelity prototype (60 points)

### Main Page

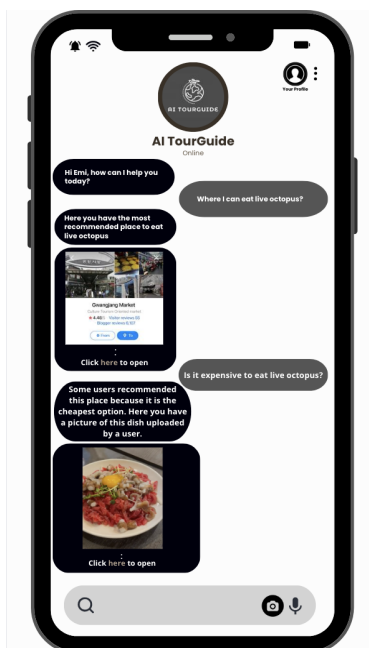

### Task 1-1: Chat (Transport & Recommendation)

### Task 1-2: Chat (Translate)

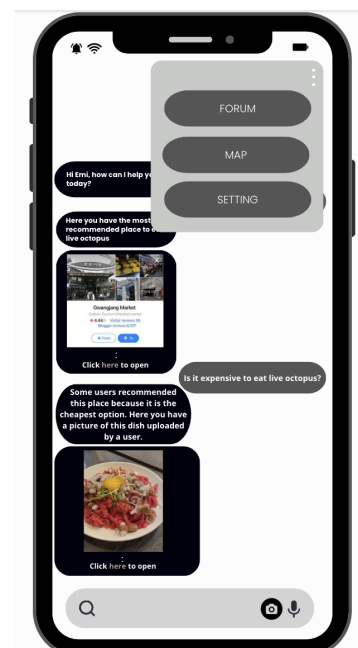

### Task 1-3: Chat (Recommendation)

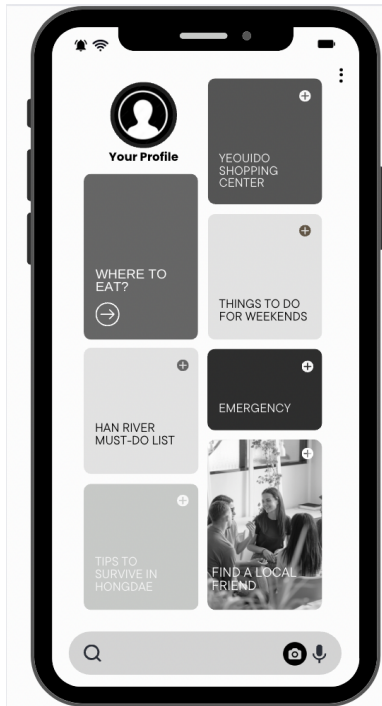

### Task 1-4: Chat (Emergency)

### Task 1-5: Chat (Side bar menu)

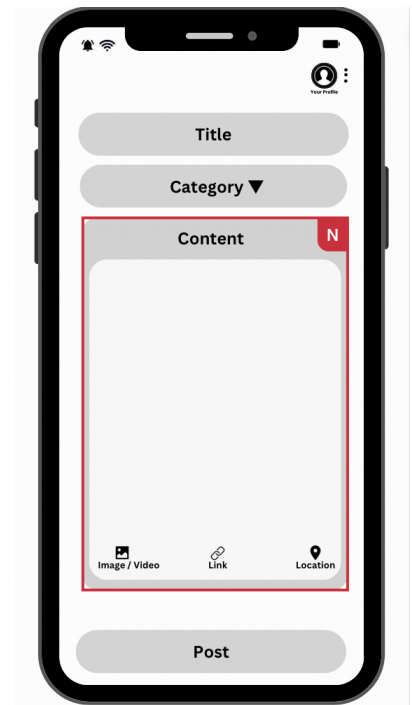

**Task 3-1: Forum (Main page)**

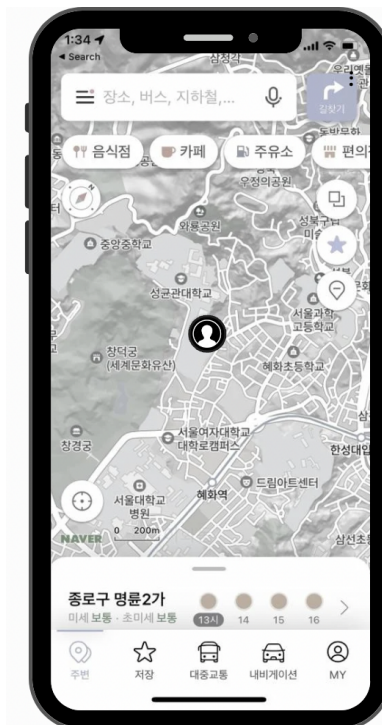

**Task 3-2: Forum (three dots)**

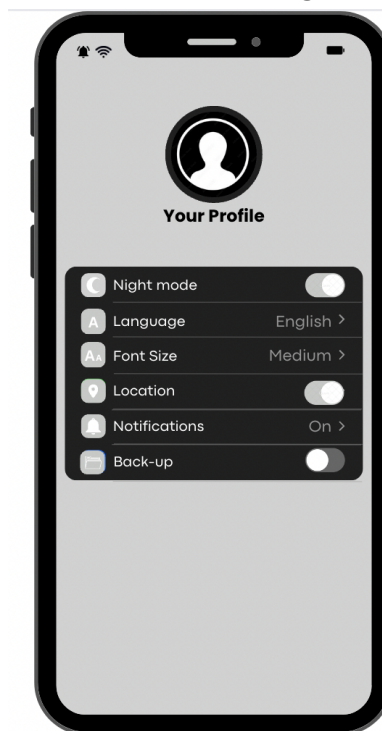

**Task 3-3: Forum (writing post)**

**Task 2: Map**

**Task 4: Settings**

Project Name: AI TourGuide

Tasks:

- Simple task: The user wants to translate words.
- Moderate task: The user wants a place to eat a specific diet.
- Moderate task: The user wants to customize the app that fits to them
- Complex task: Our user wants to get directions to a place just by taking a picture.

In order to accomplish our tasks, our app will provide 4 main Tasks:

#### **Task 1: Chat**

- **Chat function** will allow users to translate, get recommendations, find out transportation and reach out for help when they are needed by simply asking a question. Also, the chat function will analyze the picture from the user and provide enhanced assistance to our users.

#### **Task 2: Forum**

- Through the **forum**, users will get necessary information about the activities that they plan to join or places that they plan to visit. They can also share good memories with others by posting their tips.
- Posts and information will be categorized by topics to enhance users' experience and easy access to desired information
- If the content of the forum seems inadequate, users can report the post.

#### **Task 3: Map**

- By directly importing Naver **Map** application onto our app, users can easily access the app without downloading it. The map function will allow users to easily locate nearby restaurants, cafes or attractions, or search how to navigate their way to desired destinations.

#### **Task 4: Settings**

- The **settings** option will allow the user to modify different functions inside the app, that way the user could change different settings like font size, notifications, language, etc. and also an app customization might be useful for the savvy generation.
